About the WiFi Nugget

Thank you for buying a HakCat WiFi Nugget! Your purchase helps us continue to develop open-source products and free educational content for the hacker + maker community.

The WiFi Nugget is a cat-shaped WiFi hacking platform that makes it easy to run and monitor attacks. Features of the WiFi Nugget include:

Run attacks from any web browser

Custom cat graphics + reactive LED feedback

Kick devices off WiFi networks w/ Deauthing

Spam WiFi Networks with Beacon attacks!

Supported WiFi Attacks

The WiFi Nugget can run a few different attacks including:
Deauthentication - Kick devices off WiFi!

Beacon Spam - Create indefinite spam WiFi networks

Docs & More: <https://spacehuhn.wiki/deauther/>

Using the WiFi Nugget

Check your local laws and make sure you have permission before attacking WiFi devices.

To use the WiFi Nugget, start by **scanning** for nearby WiFi networks & station devices. Next, select the devices you want to target. Finally, select your attack!

Scan

Select Targets

Attack

Web Interface

Use the Web UI to conveniently run attacks from any web browser! To get started:

- Connect to the **pwned** AP with password **deauther**
- Open **192.168.4.1** in a web browser
