About the USB Nugget

Thank you for buying a HakCat USB Nugget! Your purchase helps us continue to develop open-source products and free educational content for the hacker + maker community.

The USB Nugget is a cat-shaped USB attack tool that deploys keystroke injection payloads in seconds. Use the on-screen interface to monitor the status of your attacks! Features of the RubberNugget include:

📱 Remote attacks from any web browser

👾 Custom cat graphics + reactive LED feedback

💾 Built-in flash drive for data exfiltration

⌨️ Quick payload selection system

USB Nugget Payloads

The USB Nugget is powered by DuckyScript and supports existing RubberDucky and BashBunny payloads! You can find official payloads & commands in our Hak5 GitHub repo.

Docs & More: github.com/HakCat-Tech/USB-Nugget-Payloads

Using the USB Nugget

ⓘ **Keep your Nugget up to date by flashing the latest firmware at hakcat-tech.github.io/esp-web-flasher/**

Plug the Nugget into your computer and upload payloads to the **NUGGET** drive. Payloads must be in .txt format. Use the screen & buttons to deploy your attacks! We recommend using the OS > Category > Payload naming convention below.

```
       ┌─ 📁 Linux ──┐   ┌─ 📁 Recon ────┐   ┌─ 📄 Payload1.txt
🔌 ─┤   📁 Mac      ├─┤   📁 Phishing   ├─┤   📄 Payload2.txt
USB └─ 📁 Windows ──┘   └─ 📁 Backdoor ─┘   └─ 📄 Payload3.txt
```

Web Interface

Use the USB Nugget Web UI to create, edit, and deploy payloads over WiFi! To get started:
• Connect to the **Nugget** AP with password **nugget123**
• Open **192.168.4.1** in a web browser

Development & More

• To report bugs, create an issue on our code repo at: **github.com/HakCat-Tech/USB-Nugget**.
• For more docs + info check out **usbnugget.com**

Hardware: v2.1-Dev   **Color:** Black   **Software**: v1.1-beta
